ZinMet® is a combined source of Organic trace minerals Zinc and Chromium. The unique complexation of minerals to a specific organic escort will bypass rumen degradation at a rate of approximately 80% making ZinMet more readily available for absorption through the gastrointestinal tract.

ZinMet® contains these two vital trace minerals bound to methionine available in a liquid, or powdered (ZinMet® 50) form, that can be added to stock feeds according to the required feeding rate.

**Manufactured in Australia**

It is advisable to feed twice the recommended level of ZinMet® in periods of high risk, or when stress conditions prevail (i.e. prolonged wet weather, newly exposed gravel laneways/pens, footrot outbreaks, transport, lairage containment, health challenges etc).

**Composition:**
- Zinc Methionine Complex
- Chromium Methionine Complex

**Beef performance is enhanced with ZinMet® giving the following positive responses:**
- Improved feed conversion.
- Improved average daily gain.
- Stimulated immune system.
- Better tolerance to, and recovery from stress and morbidity.
- Stimulates keratin production, the main structural element in hair and hooves.
- Plays a vital role in the maintenance of the health and integrity of epithelial tissue such as the skin and mammary tissue.
- Improved cellular sensitivity to insulin which plays a critical role in many physiological functions in the body of an animal.
