

DAIRY

ZinMet® is a combined source of Organic trace minerals - Zinc and Chromium. The unique complexation of minerals to a specific organic escort will bypass rumen degradation at a rate of approximately 80% making ZinMet® more readily available for absorption through the gastrointestinal tract.

ZinMet® contains these two vital trace minerals bound to methionine available in a liquid, or powdered (ZinMet® 50) form, that can be added to stock feeds according to the required feeding rate.

It is advisable to feed twice the recommended level of ZinMet® in periods of high risk, or when stress conditions prevail (i.e. prolonged wet weather, poorly gravelled laneways or severe mastitis challenge).

Dairy herd performance is enhanced with ZinMet® giving the following positive responses:

- Increases milk production
- Reduced foot problems
- Reduces somatic cell count
- Boosts immunity
- Improves feed conversion efficiency
- Stimulates keratin production, the main structural element in hair and hooves
- Enhances epithelial tissue integrity, skin, mammary tissue, hoof, gut and lung wall

Composition

Zinc Methionine Complex, Chromium Methionine Complex.

Specifications	ZinMet® 100	ZinMet® 50
Description	A lavender coloured aqueous solution pH 4.2, SG 1.4	Free flowing dry form
Composition	10.00% Zinc 834ppm Chromium 20.00% Methionine	5.00% Zinc 417ppm Chromium 10.00% Methionine
Packaging	1,000kg modules	20kg bags
Normal usage rate	3.6 grams /head/day	7.2 grams /head/day
Stress condition rate	7.2 grams /head/day	14.4 grams /head/day

Compatible with most animal feeds and all processed feed ingredients.
